

**FAB POLY CLEAR PWD**

**REDUCTION CLARING  
AGENT FOR  
POLYESTER**

***FAB POLY CLEAR PWD is stabilized reductive material.***

***It has low odor***

***It shows Slow decomposition rate at high temperature compared to hydrosulphite which decomposes rapidly at high pH and temperature.***

***Removes unfixed disperse dyestuffs from polyester and blends effectively.***

***Does not contain Sulphur & boron derivatives.***

***Increase the machine cleaning, avoiding deposits due to dyes and impurities.***

***It can be used in the Dye bath also without draining the dye bath after cooling down to 95°C with 0.5% caustic along with 1 % Fab poly clear PWD. Thus it saves one RC bath and water.***

***For Light shade RC, it can be done as suggested in the dye bath followed by Hot wash neutral in next bath.***

### ***Application***

#### ***Recommended recipe***

***Fabpolyclear PWD – 0.5 -1.0gpl***

***Caustic flake – 2.0gpl***

***Temp -90°C -30 min Hold.***

***For Extra dark & critical shade two RC steps are recommended.***
